placed on his head, whilst his better-half helped him on with his regal *imi* (garments), as well as a large sword, which also made part of his regal insignia. The crown had in front a small bear's head roughly carved in wood, and the clothes were very gaudy. They were made of strips of blue, white, and red cloth sewn together. The materials used were Japanese, but they were cut and arranged in a thoroughly Ainu pattern. Though he began well, Benry was not a good sitter, and, like most animals, he did not like to be stared at. He felt the weight of a look, as it were, and it made him uncomfortable. Not many minutes had elapsed before he became openly impatient; he even showed his temper by flinging away his crown and his wooden sword. On the other hand, sketching in Benry's house was no easy matter for me. With all the respect due to the chief of Piratori, I am bound to say that his house was not a model of cleanliness. Those of his hairy brothers and subjects were no better than his, and many were a great deal worse. Fleas and other insects were so numerous that in a few minutes I was literally covered with them, each one of them having a peaceful and hearty meal at my expense, while I, for the sake of art, had to go on with my sketch and leave them undisturbed. Notwithstanding all this Benry was immortalised twice that day, and his maid, housekeeper, or wife —three words which have the same meaning to the Ainu— was also handed down to posterity while in the act of spinning the inner fibre of the *Ulmus campestris* bark, destined to form a new garment for her lord, master, and husband.

When I went out to sketch the houses and storehouses in the village Benry and another man followed me everywhere; but neither he nor his fellow-shadow seemed to take any interest in the sketching. In Japan, Corea, and China I have often been surrounded by hundreds of people attentively watching every stroke of the brush, and I have always found them clever and quick in making out the meaning of each line or brush-mark. I can assert, without fear of being contradicted, that the majority of Japanese, Coreans, and Chinese are even quicker than Europeans in that respect, owing to the fact that lines constitute for them the study of a lifetime. Chinese characters, which are nothing but a deep study of lines, are adopted by the three above-mentioned nations, and

574 609 most distant point from the door and the window. Occasional callers are received on the side nearest to the door.

985 The few Ainu who possess mats on which they sit during the day hang them up at night round the hut, probably to protect themselves from the liberal ventilation, which even those who are used to it find trying when a gale is blowing or the thermometer is very low.

356 264 There is no particular spot inside the hut set apart for meals, and the refuse is either thrown into a corner of the hut or flung outside the door and left there. It is difficult to say whether the inside or the outside of an Ainu hut is the dirtier. Heaps of stinking refuse are accumulated round the dwellings, and in summer-time these heaps are alive with vermin—mos- [136] quitoes, flies, *abu*, and black-flies. It is quite sufficient to move a step from the door to see a cloud of these noxious insects rise, and each one of them will have a bite at you.

356 136 Inside the house you are no better off. *Taikki* (fleas) are innumerable, and of all sizes, not to mention other well-known but usually anonymous enemies of the human skin.

The first night I slept in an Ainu hut, though I was provided with insecticide powder, I was literally covered with bites. With my fondness for statistics I proceeded to count them, and only from my ankle to my knee I counted as many as 220. The rest of my body and my head were covered in the same proportion, but I gave up the attempt to ascertain the exact number—the task was too overwhelming. My skin, however, got so inflamed by these bites as to produce fever, which lasted two or three days. After that time I never again suffered to such an extent, perhaps owing to the fact that no free spot was left to attack, or may be from that curious process called acclimatisation.

342 The Ainu huts are built entirely above ground, and are used alike in winter and summer.

In olden times the hut was always destroyed at the death [168] of its owner, or when abandoned; but in the former case the custom is seldom practised now, and in the latter they are merely left to decay.

It is singular that migrating Ainu, coming across an uninhabited hut, never live in it, but build a new one for themselves.
